

## 本文主要介绍如何配置ros回流脚本内容

- 回流脚本配置如下

```
1 :global ipaddr [/ip address get [/ip address find interface=pppoe-out1]
   address]
2 :set ipaddr [:pick $ipaddr 0 ([len $ipaddr] -3)]
3 :global oldip [/ip firewall nat get [/ip firewall nat find
   comment="ESXI_WIN_33899_TO_3389"] dst-address]
4 :if ($ipaddr != $oldip) do={
5 :log info [/ip firewall nat set [/ip firewall nat find
   comment="ESXI_WIN_33899_TO_3389"] dst-address=$ipaddr]
6 :log info "dst-address update ok";
7 }
```

ros回流
